

## Acts of God - Assess the Damage

After severe weather, quickly determine the extent of damage to a portfolio of solar PV systems using live images from SolarVu cameras installed with the [SnoCam option](#). In addition to time/date stamped still images that can be viewed from the online SolarVu energy portal each SnoCam also stores 14 days of 24/7 video that can be downloaded to watch live action after the event. Use SnoCam photos and video to know when to dispatch O&M staff, document insurance claims and submit evidence if vandalism occurs. Get peace of mind knowing if something does occur during the system lifetime, a photo record will be available.
